

Elementum vs. JIRA

Elementum is the built-for-supply chain JIRA alternative your business needs.

The World's Top Brands Use Elementum

A Modern SaaS Platform Built Specifically for Supply Chain

You wouldn't expect IT to solve your supply chain problems, so why would your supply chain depend on IT software? Elementum is built specifically for supply chain management with the dashboards, analytics, and connectors you care about.

JIRA

	elementum	JIRA
Single Source of Truth Manage all your supply chain processes and exceptions in one place	●	●
Pre-Populated Workflows Increase productivity and accountability with pre-defined workflows	●	●

Real-Time Insights Leverage SC-specific capabilities to identify trends and implement corrective actions	●	◐
Self-Administration No IT, no coding, and no developers required. Go-live typically within 30 days	●	○

Users Prefer Supply Chain Service Management by Elementum

“Finally a Tool that makes sense”

★★★★☆ June 29, 2020

I absolutely love that the Incident Management System provides the ability for the business to assign an administrator who has the access to configure field values as needed without requiring IT or Elementum Support to become involved! That is a big win to me. I am also impressed by the ease in which the administrator can add master data to the IMS. I find the system itself to be very easy to use.

“I highly recommend Elementum”

★★★★★ June 19, 2020

The fact that I was able to launch this new software to 100 people by simply hosting a 30 minute online training and answering a few questions was remarkable. That speaks volumes to the usability and intuitiveness of the platform and it is one of the major reasons why I tout Elementum to others as often as I do. It is so easy to roll out.

“Love Elementum!!!”

★★★★★ June 19, 2020

I find using Elementum easy to use. It is a great tool for tracking and accountability. What I like most about this software is the ability for everyone to comment/upload into one file without sending emails over and over. Everything is stored and easy to find when needing to go back into an incident.
