

# Supply Chain

## One-Click Supply Chain Management: Illustrate, Activate, Orchestrate

### Instant Deployment

Leverage Snowflake data to gain unparalleled insights into every aspect of the supply chain.

### Proactive Monitoring

Elementum continuously mines data, automatically initiating and executing workflows based on changes.

### Easy Collaboration

Bring global teams and suppliers together to track, respond, and operate in real-time.

## Multinational Conglomerate turns Underutilized Snowflake Data to Unlock \$110M

### Challenge:

With thousands of shipping lanes and tens-of-thousands of shipments, this company was unable to accurately plan its in-transit lead times. Generic buggers were applied with tied up cash in unnecessary inventory holdings.

### Solution:

Elementum's Lead Time Optimization App dynamically monitors shipping data against actual transit times, recommended new lead times, and automatically updated POs and planned lead time in SAP. Just two tables (lanes and shipments) were required in Snowflake to get started.
